Profile

Experienced Technical Project Manager with 18 years in QA testing and project management. Successfully led over 15 major projects aligning technical and strategic objectives, and providing innovative QA solutions, ensuring seamless delivery and client satisfaction. Passionate about continuous improvement.

WORK EXPERIENCE

07/2022   MONTREAL
Technical Project Manager
Freelance
- Led internet contracts, focusing on delivering tailored solutions in website updates and AI testing, aligning with client requirements for optimized outcomes.
- Enhanced QA testing processes for AI and machine learning projects, ensuring top-tier quality standards and efficient performance.
- Executed and oversaw seamless website updates and maintenance, optimizing functionality and user experience.
- Collaboratively provided technical consulting and project management services across diverse industries, leveraging leadership, technical expertise, and strategic insight to drive client success.

09/2005 – 09/2022   MONTREAL
Project Manager
Orange Business
- Managed major client projects with a strategic focus, ensuring alignment of technical objectives and seamless delivery.
- Served as the main customer interface to plan and deploy network infrastructure, consistently meeting objectives and timelines.
- Coordinated cross-functional teams worldwide to deliver performance-focused project solutions, expertly managing risks and issues.
- Regularly documented and tracked performance metrics, driving informed decision-making and project improvements.
- Navigated multi-vendor environments, resolving delivery challenges through strategic vendor management.

WORK EXPERIENCE

09/2002 – 09/2005   MONTREAL
QA Team Leader
Equant
- Directed multi-phase QA schedules, allocating resources for comprehensive testing phases that enhanced software quality.
- Designed and implemented both functional and integration tests, elevating system reliability and performance.
- Carried out rigorous testing on telecommunication systems, ensuring adherence to industry standards.
- Mentored and supported new consultants, integrating fresh talent and fostering a collaborative quality culture.
- Developed QA reporting methods that effectively communicated system quality insights, contributing to strategic improvements.

04/2000 – 09/2002   MONTREAL
QA Team Leader
LocusDialog Technology
- Established and led a dynamic QA team through multiple testing phases, enhancing software quality for a diverse client base.
- Defined and managed comprehensive lab test equipment needs to support effective testing environments.
- Architected test systems and validation procedures for company software, improving product reliability and planning capacity.
- Pioneered the development of automated tests utilizing Hammer IT, streamlining quality assurance processes.

04/1999 – 02/2000   FRANCE
Technical Project Manager
Bouygues Telecom
- Directed the lifecycle management of key software components, from design to integration testing, ensuring successful implementation.
- Collaborated on defining integration perimeters for core software components of CIS, aligning with strategic business objectives.
- Tested critical interface operations between systems and GSM equipment, ensuring reliable call consumption validation and billing accuracy.
- Provided technical support during the critical phases of production, promoting robust system functionality.

TECHNICAL PROJECTS

2023
AI-Powered Solana Token Trading Bot
- Innovatively designed and deployed a real-time token trading and monitoring bot using JavaScript, Python and WebSockets, which advanced the application of AI technology in finance.
- Seamlessly integrated various APIs for live data capture and trading execution, elevating transaction accuracy and efficiency for better trading outcomes.
- Developed analytical modules for comprehensive market tracking, promoting informed trading strategies that adapt to dynamic market conditions.
- Implemented adaptive trading strategies that utilized historical trade insights, helping to optimize buy/sell decisions for improved profitability.
- Ensured advanced transaction handling capabilities, which prevented front-running and enhanced execution success rates through sophisticated technical solutions.
